

# Quansheng UV-K5 Spectrum mod by @fagci

**F** + **5** — spectrum launch

P.T.T — entering frequency capture mode

## Key assignment - Main spectrum window

P.T. T — Switch to frequency capture mode

**FN1** — Add frequency to blacklist

**FN2** — Backlight

— Adjustment of the spectrum frequency with the selected step

**1**

**7**

— Exposure time

**2**

**8**

— Frequency tuning step

**3**

**9**

— Scan step

**\***

**F**

— Squelch level

**4**

— Number of steps 16/32/64/128

**5**

— Direct frequency input

**6**

— Bandwidth

**0**

— Type of modulation FM/AM/USB

## Key assignment - Frequency capture mode

P.T. T — *Not assigned*

**FN1** — Monitor (disable squelch)

**FN2** — Backlight

— Frequency tuning

— Entering register management mode

— Exposure time

— *Not assigned*

— *Not assigned*

— Squelch level

— *Not assigned*

— Direct frequency input

— Bandwidth

— Type of modulation FM/AM/USB

## Key Functions - Direct Frequency Entry

**5** — Direct frequency input ( **\*** — point input)

Examples:

140 → **M<sup>A</sup>** = 140.00000

433\*875 → **M<sup>A</sup>** = 433.87500

**EXIT<sub>D</sub>** — Erase the last digit
